

How can broadcasters keep thriving
in the complex and fragmented world
of Connected TVs ?

Vincent GRIVET

Chairman of the HbbTV Association

asi 2025 International Television & Video Conference

5th-7th November 2025, Copenhagen, Denmark

Key trends of the TV world (you all know it)

- Linear TV declines and is progressively equalled by VOD (all forms)
[NB : but linear still very substantial]
- (S)VOD now embracing the core DNA attributes of linear TV; live, sports, advertising
- ... and reciprocally, traditional TV channels determined to redefine themselves as hybrid media providers ; linear + VOD
- Digital advertising grows while traditional TV advertising stagnates; Broadcasters shift to addressable
- Big TV screen remains the N°1 viewing screen
- TVs are now CTVs

Our world is moving towards a Hybrid co-leadership of legacy Broadcasters and new VOD/streaming services ... and this happens on CTVs

CTV is a very fragmented world : >10 relevant OSs

The CTV walled gardens may create significant issues for Broadcasters

- Need to manage 10-15 distinct technical environments (apps), with diminishing returns
- Broadcaster is one app amongst many : loss of prominence
- The rules of the CTV are set by the CTV / OS maker
 - Is my data really my data ? Can I use it (or do I need to re-buy it) ?
 - Is my content safe (or shall I accept that some of my content is “borrowed” to serve other purposes) ?
 - Do I still own my audience ? Can somebody observe my viewers and lure them elsewhere ?
 - Can I freely manage my ad inventory with my own tech (vs imposed sales house or adtech) ?
 - What is the Cost ?
- CTV remains widely un-regulated (vs DMA which mitigates dominance of gatekeepers in Mobile and Web)

CTV is a clear challenge to broadcaster traditional leadership

Finally some good news....

Unifies CTV for Broadcasters

Enables Broadcasters to deploy their services with reasonable
business autonomy and safety on Connected TVs

Who is HbbTV ?

a global initiative dedicated to providing open standards for the delivery of advanced interactive TV services through broadcast and broadband networks for connected TVs and set-top boxes

- industry led standardization body, 15 years of cooperation
- European focus (but now beyond Europe)
- 60+members;
- Initial focus : enrich broadcast with interactive services
- Current focus : opens standard for CTVs, independently of Broadcast networks; IP-ready
- Specifications + tests + ecosystem support

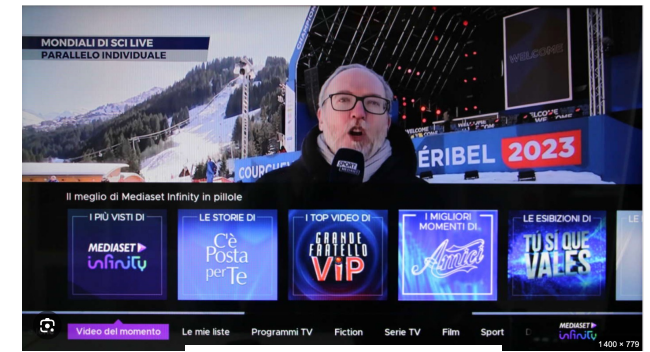

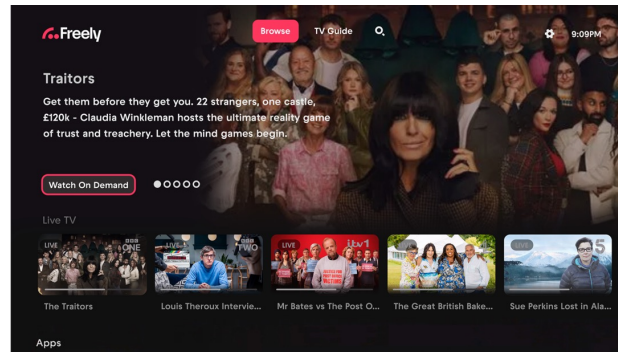

How HbbTV helps Broadcasters strive in the CTV world

- ✓ Any service / function which can be done in CTV can be done in HbbTV (and even more)
 - ✓ **B2C services** : “red button”, replay, start-over, enriched TV/information, accessibility, EPG, search, voting, personalization, multi-camera, UHD enhancement, ..
 - ✓ **B2B services** ; consent, audience measurement, addressable advertising
- ✓ Open Spec (no royalty)
- ✓ Launch point = TV content (not a menu); enables Broadcasters to exploit their linear leadership
- ✓ Transversal, horizontal : one app for all TV brands (vs N apps) and all delivery networks
- ✓ Broadcaster centric ; control of services (and data) is entirely in the hands of broadcaster (a 3d party cannot intervene in the HbbTV app; “safe zone”)

A proven and scaled technology

Broadcasters across Europe rely on HbbTV to organize their presence in a connected world

... and many more across Europe

Audience Measurement with HbbTV

- Complement panels with big data
- Low cost
- Simple consent management
- Remove zero ratings / long tail

Addressable Advertising with HbbTV

- HbbTV enables addressable advertising (replacement) with core specification since 10 years
- Also enables “special” formats (eg ; L-Shape)
- HbbTV-TA specification enables **frame accurate (invisible) dynamic ad substitution**
- TA compliant receivers now on sale ; 15-20m in 2026 (est.)

... and many more across Europe

Wrap-Up

- Broadcasters severely challenged by new TV paradigms and players
- CTV are great as they support Broadcaster adaptation to new market conditions
- But CTV may pose several issues for Broadcasters, starting with technical fragmentation
- HbbTV creates a more friendly option for Broadcasters on CTVs
 - All modern features and functions are available
 - Technical unification : a single app
 - A friendly and controlled application environment - avoid unwanted intermediation
